Tekniset tiedot

An optical launch cable equipped with a 500 m long cable. It is terminated with an SC/UPC connector on one end and an SC/UPC connector on the other. The launch cable is used to eliminate the dead zone when using an OTDR or optical power meter. This ensures that the measurement of the target optical fiber is accurate, and no unwanted errors occur.
The laucnh cable is enclosed in a compact housing with dimensions of 110 x 110 x 45 mm, making it easy to transport and convenient to use. The kit includes a bracket for attaching the launch cable to a belt.
