LINKRUNNER 100G

LinkRunner 100G
The LinkRunner 100G is the industry's smallest and lightest handheld tester
- Prove your network delivers the performance you're paying for.

- Validate fiber and optics before they become a 2:00 am call.

- Get evidence, not assumptions, every time you test.
KEY FEATURES
Instant Network Visibility at Line Rate
- In seconds, AutoTest verifies the connected switch port and its configuration, validates link speed and key network services, giving you immediate clarity and confidence.
Proof of Performance, Not Assumptions
- Validate true capacity and quality of transmission end-to-end, with measurable, repeatable Layer 3 performance results, so your network delivers what it promises. Two LinkRunner 100G units are required for the network Performance Test.
Real-World Validation of QSFP28 Optics
- Test with the same optics and transceivers your production network uses, for true end-to-end verification with zero deployment surprises.
QSFP28 Insights
- Automatically detects and validates module type, speed, FEC settings, and interface configuration across 25G, 40G, 50G, and 100G optics single-mode, multi-mode, trunks, LC breakouts, and MTP/MPO links, so you know exactly how every module is set to operate.
Consolidated, Professional Reports
- Automatically generate documentation that consolidates every test result optical configuration, performance metrics, and link validation into one clear report you can share with management or clients.
AllyCare Pro Support Required
Every new LinkRunner 100G requires an active 1 or 3 year AllyCare Pro support plan.
Registration and activation must be completed within 3 days of first power-on.
