LinkRunner® 10G

Advanced Multi-Gig/10G Cable & Network Tester
The LinkRunner 10G is a high-performance portable Ethernet tester for Mult-Gig and 10 Gig networks (copper and fiber) that simplifies validation and configuration and streamlines workflows by combining essential functions into a single, portable, ruggedized unit.

- Install, test, verify, and troubleshoot technology upgrades, Multi-Gig (NBASE-T), and 10G networks with purpose-built hardware at line-rate.
- Physical layer testing includes cable (TDR) testing, toning, and wire mapping.
- Supports LANBERT™ Media Qualification testing to quickly validate if your existing cable plant can support higher speeds.
- Compatibility with standards-compliant SFPs enables test and validation of any wired media (copper or fiber).
- Validate up to 90W 802.3bt PSE with TruePower™ loaded Power over Ethernet (PoE) test.
- Delivers quick results for speedy problem identification and resolution, which reduces downtime and ensures timely network installations.

The LinkRunner 10G is the go-to tester for efficient network validation and troubleshooting. Its versatility, use of 3rd party apps, and ruggedness make it indispensable for any network professional.
